

Use Case #:	2
Application:	2D Rendering Software
Use Case Name:	Admin Login Use Case
Use Case Description:	This Case applies to anybody using the software that logs in as an admin.
Primary Actor:	This use case represents an admin, a user extra use privileges.
Precondition:	This case starts when a user logs in as an admin.
Trigger:	This event triggers when the user logs in with a username and password.
Basic Flow:	The user will launch the program. When prompted to login they will login using a username and password. The user choose a file to render shapes from. They will be able to add, remove, and move shapes as they please. The user will have the option of saving changes to the file.
Alternate Flows:	The user might try to attempt to login as a guest, and be unable to use the same privileges that an admin should be able to use. The user might also quit the program early.
