

Use Case #:	3
Application:	2D Rendering Software
Use Case Name:	Failed Login Use Case
Use Case Description:	This Case applies to anybody who fails to login as an admin.
Primary Actor:	This use case represents a user who tries login as an admin and fails.
Precondition:	This case must have a user who is unable to login as an admin, will try to do it anyway.
Trigger:	This event triggers when the user tries to login with a username or password that is not on the admin login file.
Basic Flow:	The user will launch the program. When prompted to login they attempt to use a username or password that is not on the admin file. When they achieve a failed login they will be prompted of their failed attempt. The user can view our contact info if they wish to request support.
Alternate Flows:	The user might try to attempt to login as a guest, bypassing the failed login prompt. The user might also login as an admin by chance, again bypassing the failed login prompt.
